ACKNOWLEDGEMENTS

This book is the result of studies that I made in recent years. For this reason, I would like to recall the scientific and human debt I owe many people during this book's writing. I wish to begin by giving special thanks to Alessandra Falzone. To her, I owe my scientific growth. She is, for me, a reference point within academia, and this book would not have had life without her valuable suggestions.

I would also like to express my gratitude to Marco Gamba. The encounter with him was so important during my PhD and it allowed me to explore a topic I love.

I would like to take this opportunity to thank the Department of Cognitive Sciences - University of Messina - and its young researchers and professors who have contributed to my academic background. A collective thanks to my friends for supporting my book project.

I also wish to thank my family for their unwavering support.
