Preface:

The changing face of ESP in today's classroom and workplace

Elena Bárcena Madera

Universidad Nacional de Educación a Distancia (UNED)

English for Specific Purposes (henceforth, ESP) is a subset of English as a second or foreign language which usually refers to teaching the English language to undergraduate and postgraduate students, training students of professional modules, and people already in employment. Its history is directly linked to the history of the twentieth century. After the British Empire and World War II, the economic, scientific and technological leadership and expansion of the U.S.A. caused professionals all over the world to adopt the official language of this country as a vehicle of international communication. Since its appearance in the 1960s, ESP has occupied the attention of the academic and research communities. Its central focus has been progressively diversified from English for science and technology in academic contexts, which occupied the earliest studies. Attention was diverted subsequently to studies on teacher training and interlanguage, genre, corpus and innovative methodologies and technologies. The underlying interest for the field was related not only for learning/teaching processes, but also to other types of applications, such as automatic text generation, question-answering systems and machine translation. The perspective here was rather mathematical and related to features like lexical closure and grammatical systematicity. Didactics, the main research application within ESP, is today largely determined by the enormous variety of specialized knowledge communities, genres and text types, businesses, academic disciplines and human activity in general.

The changing face of ESP in today's classroom and workplace is a valuable contribution to the research literature in ESP from several perspectives. Firstly, this international volume is illustrative of the research on ESP that is taking place in four continents (Africa, America, Asia, and Europe), fourteen countries (Algeria, Bangladesh, Brazil, Iran, Italy, Japan, Jordan, Russia, Spain, Sudan, Turkey, and United Arab Emirates), and fourteen higher educational institutions (including face-to-face and distance learning modalities). Secondly, this volume

comprises an unusual selection of studies and, in that sense, it offers a rare panoramic account of ESP research. Thus, the book is divided into three major sections: (1) ESP in specific fields, (2) ESP through technology and culture, and (3) ESP and EAP (English for Academic Purposes) in CLIL (Content and Language Integrated Learning) and ELT (English Language Teaching). This structure allows the reader to be informed about recent research that has been undertaken in different areas of the world on the field of ESP from three well-defined perspectives: domains of application, technology, and pedagogy. The domains of study are varied, such as aviation, shopping bags, and psychology. The most common one is business and economy, although there are several studies with other goals, which cut across different domains. Both the written and the oral modalities are covered in the chapters, although the former receives more attention, as expected in ESP research. There is a range of genres covered, the most common being abstracts, which cut through many professional and academic written text types. The common underlying goal of all the pieces of research presented in the chapters is the improvement of aspects of the ESP instruction, such as technical vocabulary and phraseology. Since ESP is one of the learner-centered modalities within the field of English as a Second/Foreign Language, there is a recurrent concern, usually present in mainstream ESP research, regarding the adequacy of academic syllabi to students' real needs, which largely align with the communicative requirements of their future professional niches.

The first section of this volume starts with a chapter authored by Assassi and entitled "The Importance of Formulaic Language in Aviation English: A case study". As inferred by the title, aeronautics is the first specific field of application of this section. This is not a fortuitous fact since, as Assassi explains, English is the international language of aviation and is, therefore, mandatory for Algerian people working in this growing industry to master this linguistic variant, so that they can operate on aviation internationally. This goal is not devoid of challenges, especially in the case of Algeria, where other more widespread languages are seen to interfere with English and there are no specialized academic programmes for this language. This chapter presents research that highlights the affordances of developing listening comprehension skills and fluency in non-routine flying scenarios. The proposed specialised language programme includes aviation phraseology as a type of lexical approach since it is claimed that it helps reach native-like proficiency that can be crucial in ensuring safety in critical situations.

Chapter 2 focusses on a case study in Jordan, in which Alomoush assesses linguistic and code -mixing practice with reference to the use of English in adverts on printed product labels. The domain of study is "shopping bags". Discursive representations of economic globalisation and implicit English-

centred policies are analysed in a heterogeneous corpus of language samples. The premise of the research is related to potential differences in terms of monolingual and multilingual practices and the study reveals that economic activity has a direct impact on the use of English only and, conversely, of code-mixing practices (i.e. Arabicised English and Romanised Arabic), reflecting a melding of local and global identities. Therefore, this study establishes a relation between language choice and the luxurious vs. ordinary socioeconomic and cultural associations involving the type of products. The chapter, in summary, reveals aspects of the sociolinguistic landscape of Jordan and the attached social prestige of the English language in this country.

Ahmed assesses the needs analysis for Khartoum State's vocational training Centres in Chapter 3. Based on a number of hypotheses, firstly, it analyses the extent to which trainees' English language needs in the Sudanese vocational training centres are met by the corresponding academic syllabi. Secondly, the level of satisfaction of the teaching staff at the training centres with the English language syllabi is analysed. Following an analytical methodological approach, the findings of the study reveal the convenience of meeting the expectations and increasing the motivation of the trainees through courses focused on technical vocabulary. The chapter concludes that further ESP needs analyses should be undertaken by the expert community and that the trainers and trainees' views and experiences about academic syllabi should be taken into consideration when judging the effectiveness of ESP courses.

In Chapter 4 Amerian focuses on occupational English for university graduates in today's Iranian business sectors from a professionals' perspective. The research presented is related to the practical dimension of EAP across various disciplines, and how learners must be effectively prepared for the real use of English that they will eventually need to use at work. The study undertaken involves Iranian human resource managers and employed graduated students as stakeholders. It focuses on various sectors within the fields of business and economics. Among the findings, employers consider productive English skills to be more important for employees than receptive ones and there is a discrepancy between the academic evaluation of Professional English and managers' views in the practical working environment. This chapter, and with it the whole section, finish with a reflection about the need for reconsidering the pedagogy of EAP courses in business, including not only the teaching methodology but also the contents and the learning activities in light of students' future occupational demands.

After this mosaic-like view of research concerns in various key domains of application, the second section of this volume deals with four more chapters on ESP concerning technology and culture. Chapter 5, entitled "Transnational Digital Literacy Practices of Two Karen Refugee Female Adolescents:

Multimodality and Spaces”, is authored by Sharmin, who undertakes a study of the literacies of two Karen refugee adolescents living in the Southeastern United States. Scholarship is identified to be lacking in this type of ethnolinguistic population. However, this study also finds that their digital lives outside school abound with rich literacy practices that can be incorporated into their academic literacy practices. More interestingly, although not all of them help these people develop as learners, those activities that connect them with their own community emotionally have a remarkable cognitive impact. The experience reported in this chapter shows that if teachers are informed about the digital literacy practices of displaced learners from media-impooverished backgrounds and incorporate them in their instructional design, they can become proficient technology-supported ESP learners.

Chapter 6 outlines an extensive experiment conducted by Robinson in which students of Social Work and Social Policy were provided with Beatles songs in each lesson for different activities and functions in English learning, with the students appreciating this and finding it an effective use of ESP. Songs, a widely used tool in general English teaching, are not so common in ESP. The use of the songs is reported to be constant throughout the course and target a wide range of linguistic and even soft capabilities. The results from this qualitative research reveal that students view this song-based approach within ESP training not only as being appropriate, but also valid and effective.

E-learning, a key focus for many higher education institutions around the world, is considered by Rubstova and Dobrova in Chapter 7. They focus on goal 4 of the 2030 Agenda for Sustainable Development, as adopted by the United Nations. Goal 4 is concerned with ensuring inclusive and equitable quality education and promoting lifelong learning opportunities for all. The authors claim that not only are digital technologies having a major impact on the educational system, they can also bring goal 4 into effect. This is due to the key role that they can play in distance teaching/learning for disciplines, including ESP. A scenario is then presented involving a wide range of distance learning programmes for ESP developed at the Faculty of Modern Languages of Saint Petersburg State University, even if there is not a great demand for such courses, as can be expected.

Finally, Gaye in Chapter 8 assesses the broader area of perceptions and misconceptions in ESP. She starts with a reflection on the fundamental role of learners’ needs in the ESP approach to course design and teaching activity. The author refers back to abundant expert literature to claim that ESP is one of the main learner-centered modalities within English as a Second/Foreign Language. Her theoretical reflections go on to consider common misconceptions about ESP, such as whether it is about the teaching of a given specialized variety of English with divergences from the standard language.

Furthermore, ESP teaching is often limited by English instructors to the teaching of vocabulary, in detriment to other aspects of language use. This chapter attempts to provide useful insights into the teaching/learning process of English in specialized contexts.

The third and last section of this volume is dedicated to pedagogical issues. In Chapter 9, Rubrecht focuses on a programme implementation without pedagogical standardization. By assessing the SOCEC programme at a Japanese university, he considers the debate regarding L1 inclusion. He concludes that CLP (classroom language policy) should happen after student's characteristics, which deals with their prior learning experiences, proficiency levels in the target language and learning goals. Chapter 10, entitled "Examining L2 learners' source text reading strategies for an MA module assignment in a UK university" and authored by Kamiyo, who deals with the connections between reading source research texts in content-based courses, understanding intertextuality within that genre, and developing writing skills. The author observes how little research has been undertaken on the reading of source texts by second language learners and the cognitive processes of critical analysis that this activity involves. An experiment applies the cognitive reading framework and presents some learners using think-aloud methods to read self-selected reviews of scholarly literature. Findings indicate a comprehensive representation of the source texts via the adoption of critical and evaluative reading strategies of the learners, such as the elaboration of content, the creation of inferences, awareness of the textual structure, and the use of paraphrased descriptions.

Chapter 11, entitled "Investigating the system of TRANSITIVITY in passive that-clauses of research abstracts" and authored by Nunes and Orfano is grounded in Halliday's Systemic Functional Linguistics theory and corpus linguistics methodologies. As part of this research, verbs are explored within the system of TRANSITIVITY in passive that-clauses retrieved from research abstracts within the Corpus of Academic English, a learner corpus from the Federal University of Minas Gerais in Brazil. They are compared with similar elements from a reference corpus containing abstracts published in high-impact journals across various disciplines. Among the findings, there are higher frequencies of passive that-clauses with verbs realizing mental processes in the former corpus. Investigating how these students use passive constructions in abstracts in comparison to a Lingua Franca corpus can yield interesting insights that have the potential to improve the design of academic writing pedagogical materials for Brazilian graduate and undergraduate students.

Moraza Erasquin is the author of Chapter 12, entitled "Designing research for academic writing in the field of Psychology". The chapter offers a reflection of the prominent role of professional text writing in the training of

ESP, which accounts for the recent high number of apps aimed at this skill. Specifically, different qualitative and quantitative methodologies are used to identify the most challenging texts for Psychology professionals for students to work with real templates. Among the findings are several linguistic features that are inherently difficult for psychologists when writing common texts in their specialized domain. Taking such difficulties into account, students are guided in the writing of professional Psychology texts. The templates created are available in both Spanish and English, so that students of the latter can undertake an effective contrastive approach. The templates can, therefore, be used as learning materials in bilingual Psychology programs.

Ekoç considers in Chapter 13 the phenomenon of hedging and boosting on the writing of abstracts by undergraduate ELT students. It deals with a linguistic topic which is common to the majority of text and discourse types: hedging and boosting, i.e., showing detachment or increase of commitment to the proposition on the part of the speaker/writer, respectively. The author refers to the body of literature on interactional metadiscourse markers and other strategies used by academics and researchers and observes that little attention has been paid to their teaching until now. He focuses on abstracts given their relevance in the submission process for conference presentations, articles, book chapters, etc. An experiment is then presented, which consists of a number of students of ELT writing abstracts that summarize their presentations as part of an oral expression and public speaking course. The number of occurrences of lexical and grammatical hedging and boosting reveals some use of these strategies and also the need to include interactional metadiscourse markers in undergraduate writing classes to tone down or strengthen their statements as appropriate.

Calleja Rituerto presents a pilot study on a specific grammatical phenomenon as part of an ESP course in the field of Catering undertaken by Spanish young adult learners in Chapter 14. The course follows a CLIL methodology. The focus of the study is the learners' interlanguage during the acquisition of English dative alternation in the process of addressing personal relations and as part of the commercial or professional interchange. There are two groups of learners in the study, one that receives explicit instruction on the linguistic structure and another that receives no feedback, following a strict communicative approach. The experiment reveals difficulties with both methodological perspectives and suggests that instruction should not only focus on cross-linguistic contrasts but also prioritize complex interface integration.

The plethora of topics and studies covered offers a valuable modern insight into the main concerns of the ESP stakeholders, namely university teachers, professional instructors, postgraduate and undergraduate students, and researchers. Each piece of work presented in this volume has its own

motivations and perspectives on this field, but they all have in common a contemporary applied approach, beyond old clichés like that of the supremacy of the English language due to the leading role of certain native speaking countries, or the existence of specialized variants as abstract subsystems that contrastively exhibit common, reduced and divergent features with respect to the standard variants of the language.

In this volume, the reader will find an updated illustration of ESP research that is taking place internationally. The learner-centredness that characterizes the field of ESP is presented in its rich socioeconomic and cultural varieties, which includes displaced people (and their peculiar linguistic realities). Similarly, the socioeconomic scenario behind ESP instruction covers relevant sustainability issues, as defined by the United Nations. This book reflects not only the complex reality of the professional and academic worlds of reference, but also the maturity of the field of ESP at the time of its publishing, which builds on its identity as an international vehicle of verbal communication used mainly in occupational domains or areas of reality. The work presented is generally well-grounded on some of the latest theoretical principles of linguistics and/or learning. The chapters often seek to innovate the practical methodology of teaching ESP (via CLIL, EMI [English as a Medium of Instruction], etc.) and explore its strategic use at both national and international levels. This collection of chapters will undoubtedly help the reader understand the significance of ESP in society, particularly in professional and academic domains, and the need to respond to their evolution using learner-centered instructional design and materials and technological resources and tools, as they become available.

Contributors

Amina Gaye is an Applied Linguist teaching English at Fatima College of Health Sciences, Abu Dhabi, UAE. She holds a PhD. Her teaching and research areas include Academic Writing, Computational Linguistics, Curriculum Design and ESP Teacher Training. She is a member of the International ESP Teachers' Association (IESPTA).

Arzu Ekoç received her BA from Translation Studies from Boğaziçi University and her Master's in ELT from Istanbul University. She completed her PhD in ELT at Istanbul University. She has been working as an English lecturer at Yıldız Technical University in Istanbul, Turkey, since 2006. Her research interests are learner identity, higher education and continuing education, EAP, second-language writing.

Bárbara Malveira Orfanò is an Adjunct Professor at the Federal University of Minas Gerais, Brazil. Her main research interests are corpus-based studies within Applied Linguistics with a focus on learner corpora, specialised corpora and English for Academic Purposes.

Brian G. Rubrecht is a Professor in the School of Commerce's English Department at Meiji University in Tokyo, Japan. He earned his Masters degree in TESOL and Bilingual Education from Georgetown University in 2000 and graduated from The University of Texas at Austin in 2004 with a doctoral degree in Foreign Language Education. His professional and research interests include aspects of language learning motivation, second language writing, curriculum development, translation and interpretation, identity, phonetics, and cultural aspects that influence the learning of a foreign language.

Elena Bárcena Madera is a full professor in the Department of Modern Languages at UNED, the Spanish national distance learning university, where she is the founding coordinator of the Master in Information and Communication Technologies for Language Learning and Processing. She has also been the director of the ATLAS (Applying Technologies to Languages) research group since 1997. She is also an expert adviser for national and international institutions and a member of the editorial board of a number of specialized journals in this field. She is also currently working the boundaries

between formal and non-formal language learning, particularly on Mobile Assisted Language Learning and Massive Open Online Courses.

Ian Michael Robinson is a language Researcher at the University of Calabria in Italy. He has taught in many different places, including Greece, Japan and the UK, as well as in Italy where he is particularly involved in ESP. He has also written articles on such topics as fairy tales and corpus linguistics, CLIL, and intercultural studies.

Iván Calleja Rituerto works as an English language teacher in primary and secondary schools and is currently a PhD candidate at UNED, Spain. He holds a MA in both Teaching Languages and European Literature and Gender, Identity, and Citizenship (Universidad de Huelva). His interests are teaching and learning of languages through content transversality and EAP.

Joanna Moraza Erasquin is a language teacher and a PhD candidate at UNED, Spain. She holds an MA in Applied Linguistics in Spanish as foreign language acquisition. Her interests are CLIL and ESP.

Leonardo Pereira Nunes is an Adjunct Professor of English for Academic Purposes (EAP) and a member of the Laboratory for Experimentation in Translation (LETRA) at the Federal University of Minas Gerais (UFMG), Brazil. His main research interests are corpus-based studies and machine-assisted human translation within academic writing.

Mohamed Abdelsalam Osman Mohamed Ahmed is an assistant professor who has worked for more than ten years in different institutions such as Sudan University of Science and Technology, Bahri Ahlia College, Gizera College of Technology, and Halfaya Vocational Training Center. He holds a PhD from Sudan University. He is a member of the International ESP Teachers' Association. His interests are in all branches of linguistics specifically in ESP, Semantics, Syntax, and discourse analysis.

Mohammad Amerian holds a Ph.D. in Teaching English as a Foreign Language (TEFL) from Allameh Tabataba'i University (ATU), Iran. He has taught English at various levels and is currently a lecturer in the university, Business English tutor and interpreter. His research interests include ESP, content knowledge, content-based instruction and curriculum development.

Omar I. S. Alomoush is an Assistant Professor of English linguistics at Tafila Technical University, Jordan, where he is currently Head of English Department. He holds a PhD in Sociolinguistics from the University of Liverpool, UK. His research interests include sociolinguistics, English and globalisation, language policy and planning, linguistic landscape, Arabic semantics and pragmatics. He published several papers in sociolinguistics and linguistic landscape in prestigious journals such as *English Today*.

Sonia Sharmin completed her Ph.D. in TESOL from the University of Georgia in 2018 where she was also a Fulbright Foreign Language Teaching Assistant. She has taught in Bangladesh and the U.S. for more than 13 years. Her areas of interest are second language writing, digital literacy, and composition studies.

Svetlana Rubtsova is an associate professor and the head of ESP department, Dean of the Faculty of Modern languages at St. Petersburg State University (SPbSU). She holds a PhD in Philology (St. Petersburg State University, 1983), with an extensive experience in teaching GE/EAP/ESP, teacher training, translation studies, intercultural communication studies, course development and syllabus design, language and assessment (examiner of BULATS 2016-2017), ELT and translation studies management in St. Petersburg University, supervisor of the educational programme "Translation in the sphere of professional communication"

Takeshi Kamijo is currently a professor at the College of Business Administration, Ritsumeikan University, Japan. His research interests include English for Academic Purposes, reading and writing strategies, socio-cultural theory and learner development, classroom research and language testing and assessment.

Tarek Assassi is an associate professor at Biskra University, Algeria. He holds a doctorate degree in English Language and Education, and he has taught several courses and supervised a number of master's dissertations. He is a certified assessor of aviation English (EALTS) by Bournemouth University experts, and he is currently the pedagogical coordinator of the Centre for Intensive Language Teaching at the same university.

Tatiana E. Dobrova has been teaching General English and ESP for International Relation and Law Bachelor students of Saint Petersburg State

University since 1998, an author some textbooks, educational aids and teaching devices. She is currently Academic Secretary of the Faculty of Modern Languages. The sphere of her academic interests includes the general issues of ESP methodology, integrating digital technologies in ESP, the issues of intercultural communication and intercultural competence, teaching ESP for Chinese students.
